Building a Birdhouse

You have noticed quite a few birds in your backyard, and you would like to build them a birdhouse. After considering various three-dimensional figures, you decide a triangular prism would be perfect for a few birds at a time to rest. You need to buy one piece of wood for each face of the birdhouse. How many pieces of wood should you buy, and in what shape will each board need to be cut? Use the space below to draw the bird house.
